

Norfolk Collegiate

Norfolk, VA

The Application

Norfolk Collegiate is an independent, coeducational college preparatory school located in Norfolk, VA. Norfolk Collegiate has been providing quality education since 1948. In keeping with the school's high standard for excellence, Norfolk Collegiate embarked on finding a company that would enable Norfolk Collegiate to offer its students the cutting edge in technology. After contacting many educational facilities, they decided that Dynamic Systems Integration was the best suited company to help them reach their Technology Vision.

The Innovation

Dynamic Systems Integration designed and installed a campus-wide, voice, video, and data integrated system at Norfolk Collegiate. Thirty-two classrooms and two buildings are now dynamically linked with a campus-wide LAN and the AMX Synergy Media Resource Management System. DSI utilized a Leviton Certified structured cabling system using Category 5 cable for both voice and data. The AMX Media Management System uses Synergy Client to provide remote access to the Synergy Server for scheduling and source control. Norfolk Collegiate is now in the process of building a new Middle School which DSI will connect to the existing school plant.
